

### General information AquaFinesse® made especially for your SWIM SPA

The AquaFinesse® SWIM SPA kit is an all-in-one solution that makes maintaining your swim spa easier. The patented AquaFinesse® SWIM SPA has a unique and balanced composition that prevents the adverse effects of chlorine, improves the quality of the swimming water and optimises the experience of a bath. Extensive tests carried out by the KEMA Institute Netherlands and Labo Derva Belgium confirm the benefits.

### Contents of the kit:

- AquaFinesse® SWIM SPA contains 30 tablets. 1 tablet per week is enough for the swim spa\*
- 30 x 20 gram chlorine disinfection tablets
- 1 floating dispenser, for the dosing of both the AquaFinesse® SWIM SPA tablet and the chlorine tablet
- 1 user manual
- 1 glove

\* The entire kit is enough for 30 weeks of water maintenance, assuming that the swim spa holds a volume of approximately 8,000-10,000 litres of water. For that water volume, 1 Swimspa tablet is enough for one week's maintenance.

### Carefully read the instructions below before use!

1. Regularly rinse out the filter and/or use AquaFinesse® FILTER CLEANER. The filter is an important element of the water treatment process, so keep it clean.
  2. (Vacuum) clean the bottom of your swimspa on a regular basis.
  3. Keep the water level as high as prescribed by the manufacturer.
  4. If possible, start with clean water and add a chlorine tablet and an AquaFinesse® SWIM SPA tablet\* to the floating dispenser and/or the skimmer.
- \* 1 AquaFinesse® SWIM SPA per week is enough. Do not overdose. Always make sure there is a chlorine tablet in the dispenser and/or skimmer.
5. Repeat the dose on the same day every week, if possible.

### Benefits of using AquaFinesse® SWIM SPA

- Clean walls, no limescale, clear water
- Stable pH levels thanks to AquaFinesse® SWIM SPA
- Eco-friendly, no complicated tests
- User-friendly
- Saves pumps and valves
